SAFE SYSTEM OF WORK: PUSHING AND PULLING WHEELED BINS

ISSUE 4

DATE ISSUED: 01/04/25 **PREVIOUS REVIEWS:** July 2018, July 2019, July 2020, January 2021, January 2022, March 2023, March 2024

ISSUED BY: Sarah Philbin – Managing Director

IN CONSULTATION WITH: Muriel Parker

REVIEW DUE: March 2026

This activity includes the safe pushing and pulling of wheeled bins.

PERSONS AT RISK: All drivers and authorised personnel

HAZARDS:

- Faulty/damaged bins and wheels
- Overloaded bins

WHEELED BINS – SAFE HANDLING

- Always wear your PPE – gloves, hard hat, glasses, shoes and clothing supplied by Philbin Glass Recycling Ltd.
- Check the immediate area for potential risks before moving a bin – uneven floor, the public and any obstacles.
- Never lift tubs/containers or boxes of bottles – leave them and report to management when you return to site.

- Never move a bin which is full of crushed glass as this will be too heavy for the bin load capacity.
- Before moving any bin, look at the wheels and body for damage and that the lid is full shut. Never tip a bin that is damaged and report incidences of this type to management when you return to site.
- Never tip a bin where the lid is partly open.

Method of Moving a Bin

Take a firm grip with both hands Place one foot forward Unlock knees 'Dip and Drive'® to start the pull

1100ltr Bins pulling

Take a firm grip with both hands Place one foot forward Unlock knees 'Dip and Drive'® to start the pull

1100ltr Bins pushing

Take a firm grip with both hands Place one foot forward Unlock knees 'Dip and Drive'® to start the pull

1100ltr Bins pushing
